

Evgen Kulbachenko

Junior FullStack Developer

Summary

I am a Junior Full Stack Developer with hands-on experience in building both frontend and backend parts of web applications. I have successfully delivered projects in my portfolio, including team-based, where I acted as team lead on two occasions. In one of the projects, I developed backend architecture, implemented secure authentication with JWT and Google OAuth, and documented APIs with Swagger.

With a strong background in business operations and project management, I combine technical proficiency with a clear understanding of business needs. I'm passionate about clean code, scalable solutions, and continuous learning.

My goal for "today" is to contribute value through real-world projects.

My goal for "tomorrow" is to grow into a confident Middle Full Stack Developer.

My long-term vision is building meaningful products, grow with the team, never stop evolving.
